

AMENDMENTS TO THE CLAIMS

Claims 1-30 (cancelled).

Claim 31 (currently amended): A method of identifying an organic or an inorganic molecule that binds specifically to a site on a MN protein or a MN polypeptide, to which site vertebrate cells adhere in a cell adhesion assay, comprising testing an organic or an inorganic ~~molecules~~ molecule in a cell adhesion assay, comprising:

(a) allowing said MN protein or said MN polypeptide to bind to a substrate, to which substrate vertebrate cells do not bind;

(b) rinsing unbound MN protein or unbound MN polypeptide from said substrate;

(c) incubating ~~said~~ the bound MN protein or the bound MN polypeptide with said organic or inorganic ~~molecules~~ molecule, and with said vertebrate cells;

(d) rinsing unbound vertebrate cells from said bound MN protein or bound MN polypeptide; and

(e) identifying ~~molecules that inhibit~~ whether said organic or said inorganic molecule inhibits the adhesion of said vertebrate cells to said MN protein ~~[[as]]~~ or to said MN polypeptide by specifically binding to said site;

wherein said MN protein or said MN polypeptide is specifically bound by the M75 monoclonal antibody that is secreted from the hybridoma VU-M75, which was deposited at the American Type Culture Collection under ATCC No. HB 11128, and is encoded by a nucleic acid whose nucleotide sequence is selected from the group consisting of:

(1) SEQ ID NO: 1;

(2) nucleotide sequences that hybridize specifically under stringent hybridization conditions of 0.02 M to 0.15 M NaCl at temperatures of 50°C to 70°C to the complement of SEQ ID NO: 1; and

(3) nucleotide sequences that differ from SEQ ID NO: 1 or from the nucleotide sequences of (2) in codon sequence due to the degeneracy of the genetic code.

Claim 32 (previously presented): The method of Claim 31 wherein said molecule is organic.

Claim 33 (previously presented): The method of Claim 31 wherein said molecule is inorganic.

Claim 34 (currently amended): The method of Claim 32 wherein said molecule is a protein or a polypeptide.

Claim 35 (currently amended): The method of Claim 34 wherein said protein or polypeptide comprises an amino acid sequence selected from the group consisting of SEQ ID NOS: ~~107,~~ ~~108,~~ ~~109,~~ 137 and 138.

Claim 36 (currently amended): The method of ~~Claim 32~~ Claim 34 wherein said polypeptide is selected from the group consisting of SEQ ID NOS: ~~107,~~ ~~108,~~ ~~109,~~ 137 and 138.

Claim 37 (previously presented): The method of Claim 31 wherein said organic or inorganic molecule, when in contact with a vertebrate preneoplastic or neoplastic cell that abnormally expresses MN protein, inhibits the growth of said cell.

Claim 38 (currently amended): The method of Claim 31 wherein the site on the MN protein or the MN polypeptide, to which site said vertebrate cells adhere in said cell adhesion assay is within the proteoglycan-like domain ~~or within the carbonic anhydrase domain of the MN protein.~~

Claim 39 (currently amended): The method of Claim 31 wherein the site on the MN protein or the MN polypeptide

comprises an amino acid sequence selected from the group consisting of SQ ID NOS: 10 and 97-106.

Claim 40 (cancelled).

Claim 41 (previously presented): The method of Claim 31 wherein said vertebrate cells are mammalian cells.

Claim 42 (previously presented): The method of Claim 31 wherein said vertebrate cells are human cells.

Claims 43 and 44 (cancelled).
